ASKAR SHAMSHIDINOV

+82 10 5750 8162 | askarkanatbekovic@gmail.com | github.com/askarbekkk | Daejeon, South Korea

AI engineer with two years of frontend and full-stack development: built a production RAG assistant (50–300 queries/day), fine-tuned retrieval models for Kyrgyz, and shipped React, Next.js and NestJS products.

EDUCATION

Woosong University, Endicott College of International Studies — **Daejeon, South Korea**
B.S. in Artificial Intelligence & Big Data — *Expected graduation: Aug. 2027*
Available full-time from Dec. 2026 — final semester credited as a co-op internship; no visa sponsorship needed.

EXPERIENCE

AI Developer Intern — Apr. – Aug. 2026
Motion Group (Kyrgyz Republic)
- Built a RAG assistant over 105 internal documents (~600 pages), replacing a rule-based, menu-driven FAQ bot.
- Implemented document retrieval, vector search and LLM response generation; simple questions answered in ~5 s.
- Deployed on Telegram for 20–25 employees and clients a day, handling 50–300 queries daily.

Frontend Developer — Sept. 2021 – Oct. 2023
MotionWeb (Russia; client projects under NDA)
- Developed responsive frontends for client websites in React and JavaScript/TypeScript.
- Built the frontend of a Web3 token launchpad: MetaMask wallet connection and smart-contract interaction via Ethers.js.
- Worked with designers and backend developers to turn designs into production pages and integrate REST APIs.

Full-Stack Developer Intern — Jan. – Apr. 2021
NEVIS TECH ITDB (Dubai, UAE)
- Built CRM systems and admin panels with React and Next.js on the frontend and NestJS on the backend.
- Implemented user authentication and REST API endpoints in NestJS; maintained existing JavaScript/jQuery pages.

PROJECTS

Kyrgyz Semantic Retrieval Research | *Python, PyTorch, sentence-transformers, Hugging Face* — Sept. 2026 – Present
- Fine-tuned multilingual-e5-base with mined hard negatives on 1,698 LLM-generated Kyrgyz Wikipedia query–passage pairs; Accuracy@1 on human-written Belebele questions rose from 0.56 to 0.74.
- Found an evaluation flaw (34% of gold passages duplicated as distractors) that understated all models by up to 26 points and reversed the BM25-vs-neural conclusion.
- Benchmarked 9 retrieval systems on 3 test sets (bootstrap CIs, Kendall's τ); leading a study on whether LLM-generated benchmarks can be trusted for low-resource languages.

Offline RAG System | KREPS | *Python, LangChain, Ollama, vector search* — Jan. – Mar. 2026
- Built a document question-answering system running entirely on local hardware — no API calls and no data leaving the network.
- Implemented chunking, vector retrieval and local LLM inference, tuned for Korean and English PDFs.

Smart Traffic Monitoring | PIAPSACE | *YOLOv8, DeepSORT, PyTorch, OpenCV* — Mar. – May 2025
- Built a custom dataset: scraped frames from public road cameras and hand-annotated ~4,000 vehicle images in Roboflow.
- Fine-tuned YOLOv8 on a university GPU cluster and built a YOLOv8 + DeepSORT pipeline for vehicle counting on live CCTV streams.

HealthChain | *Solidity, React, Ethers.js* — 2025
- Developed smart contracts with role-based access control for patients and doctors, wallet authentication via MetaMask, deployed live at healthchain-dapp-one.vercel.app.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL (PostgreSQL), Solidity
Libraries: PyTorch, sentence-transformers, LangChain, YOLOv8, DeepSORT, OpenCV, pandas, scikit-learn, NumPy, Matplotlib
Frameworks: React, Next.js, NestJS, Node.js, jQuery, Ethers.js, Streamlit
Developer Tools: Git, Linux, Docker, Hugging Face, Ollama, Roboflow, Azure, REST APIs, Telegram Bot API
Languages (spoken): Russian (native), Kyrgyz (native), English (advanced), Korean (basic)
